FUN

Strategies to help your child with homework:

Make flash cards out of index cards with all the math facts up to 10 on them (addition and subtraction) Practice these every night making sure to mix up the cards so that your child gets some subtraction and some addition.

Have your child also practice counting on and counting back in addition and subtraction.

Example: 8+5

Have your child place the number 8 in their heads and then count on 5,
8 in their head count on 9, 10, 11, 12, 13
6-5

Put 6 in your head and count back by 5
6 in your head, 5, 4, 3, 2, 1

Have students practice with different fact families.
Give your child three numbers and see if they can come up with the fact family for those numbers.

Example: 5, 6, 11

$$5+6=11$$

$$6+5=11$$

$$11-6=5$$

$$11-5=6$$
