Camels: One Hump or Two?

Six Minute Solution

Camels are funny looking mammals with humps on their backs. Camels are large animals. They are (**seven**) or eight feet tall. They have (**small**) heads but long, curved necks. Their (**legs**) are long, but their bodies are (**heavy**). Camels are used for riding or (**for**) carrying heavy loads. There are two (**kinds**) of camels. Camels with one hump (**live**) in Arabia, Asia, and North America. (**These**) camels have long legs and are (**good**) for riding. One-hump camels can run 8 (**or**) 10 miles an hour. They can travel 100 (**miles**) each day. Riding a camel is (**not**) like riding a horse. First, a (**camel**) has to kneel down before the (**rider**) can get on its back. These (**camels**) have hard pads-on their knees and (**chest**). The camel's feet are wide, with (**two**) toes. This helps to keep them (**from**) sinking into the sand. The camel (**moves**) its right legs together and then (**its**) left legs. Riding on a camel (**is**) like rolling or swaying from side (**to**) side. Two-hump camels live in Central (**Asia**). They are used to cold climates (**and**) rocky land. Camels with two humps (**have**) shorter legs with hard sales on (**their**) feet. They are used as pack. (**animals**). These camels can carry four- or (**five-hundred**) pounds on their backs. They can (**walk**) two or three miles an hour.

Camels: One Hump or Two?

Six Minute Solution

Camels are funny looking mammals with humps on their backs. Camels are large animals.

They are (**with, seven, humps**) or eight feet tall. They have (**from, camel's, small**) heads but long, curved necks. Their (**climates, legs, them**) are long, but their bodies are (**heavy, riding, kinds**). Camels are used for riding or (**sinking, shorter, for**) carrying heavy loads. There are two (**travel, hump, kinds**) of camels. Camels with one hump (**live, day, on**) in Arabia, Asia, and North America. (**These, Miles, Back**) camels have long legs and are (**moves, central, good**) for riding. One-hump camels can run 8 (**or, their, of**) 10 miles an hour. They can travel 100 (**animals, not, miles**) each day. Riding a camel is (**not, right, and**) like riding a horse. First, a (**swaying, an, camel**) has to kneel down before the (**rider, hour, four-**) can get on its back. These (**camels, in, eight**) have hard pads-on their knees and (**large, chest, good**). The camel's feet are wide, with (**two, funny, together**) toes. This helps to keep them (**carry, america, from**) sinking into the sand. The camel (**horse, pack, moves**) its right legs together and then (**camels, before, its**) left legs. Riding on a camel (**this, long, is**) like rolling or swaying from side (**to, hard, pounds**) side. Two-hump camels live in Central (**like, riding, Asia**). They are used to cold climates (**or, arabia, and**) rocky land. Camels with two humps (**its, has, have**) shorter legs with hard sales on (**knees, one, their**) feet. They are used as pack. (**animals, loads, down**). These camels can carry four- or (**a, five-hundred, can**) pounds on their backs. They can (**sales, seven, walk**) two or three miles an hour.
