

TRANSFORM YOUR CLASSROOM

Often it is not the teacher’s inability to operate the technology, but the technology is not connected properly or there are missing components. Teachers struggle with incorporating new tech into their lessons and lose student engagement in the process. Distractions are already plentiful in a classroom. Technology should not pose additional issues or distractions during instructional time.

In our effort to better assist you, Classroom Technology Coaches are available at the click of a Help Button on the desktop. We are passionate about technology and education. We look forward to assisting you as you transform your classroom into a technology-rich learning experience for your students!

App Portal (Filewave Kiosk)

You may have noticed the app on the iPads that looks like flames or sails. This is what we refer to as an App Portal. If you have requested apps and we have "pushed" them to the iPads, this is where you can find them. Sometimes, they don't show up when they are told to. If this is the case, you may be asked to look in the app portal and manually install them. This kiosk will allow you to install any apps to the iPads we have placed in there or that you have requested for us to install.

Elements 4D

Part educational story and part game, the Elements 4D app offers a new, fun way to experience augmented reality and learn about real-life chemistry.

Paired with either paper or wood blocks that are inscribed with the symbols of 36 elements from the periodic table, this app will instantly transform a simple, inanimate object into dynamic, dimensional, 4D representations of each element.

Designed by DAQRI, the Elements 4D app enables you to:

- Interact with 36 amazing, naturally-occurring elements and learn their names, what they look like, and their atomic weights
- Learn unique, fun facts about each element
- Combine two elements together and see how they react, including the catalyst, resulting compound and chemical equation
- Get inspired about chemistry!

What does technology in the classroom mean to you?

Having technology in the classroom is very important to me because I feel like it helps the students prepare for the real world. I also feel like using technology in the classroom helps save time and paper. I can have students use computer programs such as MobyMax and Stride to accomplish many different things. For example, it allows me to differentiate their instruction, supplement my instruction and obtain information for assessments. All of this can be completed with very little preparation.

How does your digital classroom look and feel?

My students use technology multiple times a day. We use computers, iPads, and a projector pretty much from the time the students come in the classroom until the time they leave. They use MobyMax, Stride, and Razz Kids. We also have Calendar Math time that is on the computer.

What is your favorite piece of technology?

My favorite piece of technology this year is my iPad.

Why?

Last year I had a brand new interactive projector installed in my classroom and I really liked it. This year, I moved classrooms and now have different technology. I was totally lost and would beg several times a day to see if one could be purchased for my classroom. I was mentioning how much I missed my old projector one day and Michelle Cummings taught me about an app that I could download on the iPad that would copy my computer screen which would turn it into an “interactive” projector. I downloaded the app, Splashtop, and it was so easy to use! I can now use my computer and projector interactively from anywhere in my classroom. The students love it too and think that it is magic. It saves time as well because now students don’t have to physically walk to the board and use a pen. All I have to do is pass them the iPad. I am also able to use Air Play as a document camera which means that I don’t have to take up the room for an actual document camera in my classroom. This is really nice since having enough space in a classroom can be a challenge. The great thing is I can also use my phone as a document camera since Air Play is also found on the iPhone.

Some say K2 is too young to implement digital classrooms –

to what extent does this ring true in your experiences?

This does not ring true in my classroom at all. My students use technology constantly. With Splashtop, my students are taking the lead with Calendar Math. I am able to pick a student to be the “teacher” and they lead the class. This allows them to also take more ownership for their learning.

What makes the digital classroom meaningful?

I feel like a digital classroom is meaningful because the earlier we can have students learn how to use and become comfortable with technology, the better prepared they will be for its many different uses. Technology is everywhere and will only increase as they age.

Do you have a favorite digital classroom moment you want to share?

One of my favorite digital classroom moments actually happened this year. After I was able to get all of my technology up and running, I immediately switched to completing Calendar Math on the computer. My students loved it and I loved to see them excited about it. Not too long ago, I turned it over to have my students lead Calendar Math time. The first time one of my students was able to lead it, my class was so excited. I loved seeing how excited they were about being able to use the technology and being able to lead the class.

LAKE CORMORANT/HORN LAKE AREAS

Are you here to take care of my ticket?

Did you get my ticket?

If we look at you like we have no idea what you are talking about, it is probably because we don't know what ticket you are talking about. The way our ticket system assigns tickets is based on the category that you choose, when submitting your ticket. Here is how the categories are broken down and to whom the tickets are assigned. I hope that this helps clear up any confusion you may have. Of course, if you ever need help with anything go ahead and fill out a ticket and we will get you taken care of, no matter who the ticket is assigned to.

Person who receives ticket	Category

Teresa Ball in the MIS Department - Central Services	Powerschool/Gradebook Issue

How do I have Apps put on the iPads?

If you have an iPad from a cart or a district owned iPad, we can remotely push apps to most of these. The easiest way to have this done, is to complete a help ticket and choose iPad/Tablet Issue as your category. This will ensure that the ticket is assigned to the Classroom Technology Coach that serves your school. When you complete your ticket, be sure to state the barcode and the serial number of the iPad you would like the app pushed to, or the name of the cart that the iPads are on if you would like the app put on several of them. Please be as specific as possible about the name of the app and if possible please include a picture of it. If you would like apps that are not free, this will require a PO from your school and a few more steps, but we can walk your bookkeeper through this process.

Keyboard Shortcuts

Are you looking for a way to make your computer time more productive? One easy way to increase efficiency is by utilizing the shortcuts that are built into your computer's operating system. Keyboard shortcuts are combinations of two or more keys that you can use to perform a task that would typically require a mouse and several clicks. Why should I use shortcuts? Shortcuts can help you save time by reducing the time it takes to highlight and select data. For example, instead of scrolling with your mouse to select a large amount of text, you can instantly select it all by using the CTRL + A command on your PC.

Cutting and pasting text between documents is also a common task that is made much easier by using CTRL + C to cut, and then CTRL+ V to paste on your PC.

Are you a Mac user? Your operating system has similar keystrokes to accomplish the same common tasks. Try incorporating these into your daily computer use and see how much they can help you simplify your work!

Shortcut Description	Windows	Mac
Select the entire page	Ctrl + A	Cmd + A
Copy selected information	Ctrl + C	Cmd + C
Cut selected information	Ctrl + X	Cmd + X
Paste copied information	Ctrl + V	Cmd + V
Open a file	Ctrl + O	Cmd + O
Save a file	Ctrl + S	Cmd + S
Undo the last operation	Ctrl + Z	Cmd + Z
Redo the last operation	Ctrl + Y	Shift + Cmd + Z
Find text in the current document/page	Ctrl + F	Cmd + F

Need some help with shortcuts? We're here to help. Just fill out a help ticket from the shortcut on your DCS computer and choose "Training Needed". Your assigned Classroom Technology Coach will be glad to come show you these tips in person.

**Webmaster/Learn360
Coordinator**

Did you know we currently have over 300,000 resources OTHER than videos on Learn360? This year the district has access to Infobase, which is known for their unprecedented depth of coverage. These subject-specific databases cover a wide range of core curriculum areas—from history, science, literature, and careers to geography, health, current issues and more—at the elementary, middle and high school academic levels. Non-video resources such as interactives, articles, audio, images, printables, science experiments, maps and interactive lessons can all be found in Learn360 now.

There are three different ways to search for interactives and/or non-video resources. The first way to search is to simply put in a keyword search in the Learn360 search engine. For example, a search for Abraham Lincoln shows the following:

You can see that "Interactives" has been clicked above the results. If you wanted to drill down your results to grade levels, click on the grade range on the right. Once clicked, the interactive will provide a reading passage which multiple choice questions.

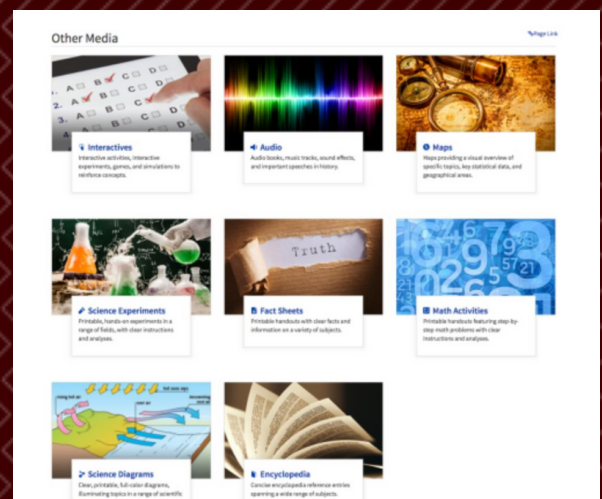

Once clicked, choose "Interactives" in the drop-down and choose Search. After that, choose your grade levels and subject matter on the right. For this example, I chose 3-5 and Mathematics. Once there, you can scroll to view the interactives in alphabetical order, by most viewed, or newest to oldest. I chose "Around the World"; an international game in which the students must defeat the other students (from different nations) in a game of multiplication fact cards.

The second way to search for interactives is by way of the "Advanced Search". Below the keyword search box is the "advanced search" option.

The last way to search is by the Menu button in the top left-hand corner. When you click the "Browser Other Media" option, you get all of the following:

Learn360 is your one-stop shop for lesson materials of all sorts. If you need help signing in or would like to know your student login for your school, email Tina Streeter.
