

## **8th Grade Science Syllabus 2018-2019**

### **1st and 2nd Six Weeks**

#### Motion and Forces

- 8.PS2.3 Create a demonstration of an object in motion and describe the position, force, and direction of the object.
- 8.PS2.4 Plan and conduct an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object.
- 8.PS2.5 Evaluate and interpret that for every force exerted on an object there is na equal force exerted in the opposite direction.
- 8.PS2.1 Design and conduct investigations depicting the relationship between magnetism and electricity in electromagnets, generators, and electrical motors, emphasizing the factors that increase or diminish the electric current and the magnetic field strength.
- 8.PS2.2 Conduct an investigation to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.
- 8.ETS1.1 Develop a model to generate data for ongoing testing and modification of an electromagnet, a generator, and a motor such that an optimal design can be achieved.

### **3rd Six Weeks**

#### Waves

- 8.PS4.1 Develop and use models to represent the basic properties of waves including frequency, amplitude, wavelength, and speed.
- 8.PS4.2 Compare and contrast mechanical waves and electromagnetic waves based on refraction, reflection, transmission, absorption, and their behavior through a vacuum and/or various medial.
- 8.PS4.3 Evaluate the role that waves play in different communication systems.

### **4th Six Weeks**

#### Life over Time

- 8.LS4.1 Analyze and interpret data for patterns in the fossil record that document the existence, diversity, extinction, and change in life forms throughout Earth's history.
- 8.LS4.2 Construct and explanation addressing similarities of the anatomical structures and genetic information between extinct and extant organisms using evidence of common ancestry and patterns between taxa.
- 8.LS4.3 Analyze evidence from geology, paleontology, and comparative anatomy to support that a specific phenotypes within a population can increase the probability of survival of that species and lead to adaptation.
- 8.LS4.4 Develop a scientific explanation of how natural selection plays a role in determining the survival of a species in a changing environment.

- 8.ESS2.1 Analyze and interpret data to support the assertion that rapid or gradual geographic changes lead to drastic population changes and extinction.
- 8.LS4.5 Obtain, evaluate, and communicate information about the technologies that have changed the way humans use artificial selection to influence the inheritance of desired traits in other organisms.

### **5th Six Weeks, week 1-3**

#### Space

- 8.ESS1.1 Research, analyze and communicate that the universe began with a period of rapid expansion using evidence from the motion of galaxies and composition of stars.
- 8.ESS1.2 Explain the role of gravity in the formation of our sun and planets. Extend this explanation to address gravity's effect on the motion of celestial objects in our solar system and Earth's ocean tides.
- 8.ETS1.2 Research and communicate information to describe how data from technologies provide information about objects in the solar system and universe.

#### Minerals and Rocks

- 8.ESS2.3 Describe the relationship between the processes and forces that create igneous, sedimentary, and metamorphic rocks.

### **5th Six Weeks, weeks 4-6 and 6th Six Weeks**

#### Minerals and Rocks and The Restless Earth

- 8.ESS2.3 Describe the relationship between the processes and forces that create igneous, sedimentary, and metamorphic rocks.
- 8.ESS2.2 Evaluate data collected from seismographs to create a model of Earth's structure.
- 8.ESS2.4 Gather and evaluate evidence that energy from the earth drives convection cycles within the asthenosphere which creates changes within the lithosphere including plate boundaries, and sea-floor spreading.
- 8.ESS2.5 Construct a scientific explanation using data that explains the gradual process of plate tectonics
- 8.ESS3.1 Interpret data to explain that earth's mineral, fossil fuel, and groundwater resources are unevenly distributed as a result of geologic processes.
- 8.ESS3.2 Collect data, map, and describe patterns in the location of volcanoes and earthquakes related to tectonic plate boundaries, interactions, and hotspots.
