

Coastal Ecology for Middle School

An opportunity for:

middle school teachers and students to explore and observe different ecosystems in the temperate deciduous forest of Alabama. Students observe and record the differences in the abiotic and biotic factors in each ecosystem. Emphasis is placed on effects of human activities on these critical habitats. Representatives of both plants and animals are observed and discussed as well as how some of those organisms are environmental indicators of both good air and water quality.

Program duration:

8:30 until 12:30 including
a break for lunch on the
grounds

Cost: \$4.00 per student

Class size: 30 students

Covering standards #5, 6,
7, 8, 10, and 11 for Life
Science
