New Milford Public Schools Attn. Kevin Munrett

RE:

Lead in water sampling

Hill & Plain School - New Milford, CT

To Whom It May Concern:

On May 9, 2016, I collected water samples from a kitchen sink and the auditorium water foundation at the above mentioned site.

Water samples were collected during the early in the morning to get the 'first draw'. After a minute flush the 'second draw' was collected and after two minutes the 'third draw' was taken from each location. The water samples were sent to Complete Environmental Testing in Stratford, CT to be analyzed for lead by EPA Method 200.8 / EPA 3005A. The results are summarized in the following table:

Sample Location	1st Draw	2 nd Draw	3 rd Draw	EPA Standard
	mg/L	mg/L	mg/L	mg/L
Kitchen Sink	< 0.001	< 0.001	< 0.001	0.015
Water fountain				
auditorium	< 0.001	< 0.001	< 0.001	0.015

All samples were below the EPA Action level for lead in tap water of 15 ppb (0.015 mg/L).

More information about lead in water can be found at the following websites: https://www.epa.gov/your-drinking-water/basic-information-about-lead-drinking-water

If you have any questions, comments, or concerns please contact me at rebenhack@hygenix.com or (203) 324-2222. Thank you.

Sincerely,

Ryan Ebenhack Hygenix, Inc.

CT Lead Inspector License # 002167

Quality Control Definitions and Abbreviations

Internal Standard (IS) An Analyte added to each sample or sample extract. An internal standard is used to monitor retention

time, calculate relative response, and quantify analytes of interest.

Surrogate Recovery The % recovery for non-tarer organic compounds that are spiked into all samples. Used to determine

method performance.

Continuing Calibration An analytical standard analyzed with each set of samples to verify initial calibration of the system.

Batch Samples that are analyzed together with the same method, sequence and lot of reagents within the same

time period.

ND Not detected RL Reporting Limit

Dilution Multiplier added to detection levels (MDL) and/or sample results due to interferences and/or high

concentration of target compounds.

Duplicate Result from the duplicate analysis of a sample.

Result Amount of analyte found in a sample.

Spike Level Amount of analyte added to a sample

Matrix Spike Result Amount of analyte found including amount that was spiked.

Matrix Spike Dup Amount of analyte foun in duplicate spikes including amount that was spike.

Matrix Spike % Recovery % Recovery of spiked amount in sample.

Matrix Spike Dup % Recovery % Recovery of spiked duplicate amount in sample.

RPD Relative percent difference between Matrix Spike and Matrix Spike Duplicate.

Blank Method Blank that has been taken through all steps of the analysis.

LCS % Recovery Laboratory Control Sample percent recovery. The amount of analyte recovered from a fortified sample.

Recovery Limits A range within which specified measurements results must fall to be compliant.

CC Calibration Verification

Flags:

H- Recovery is above the control limitsL- Recovery is below the control limits

B- Compound detected in the Blank

P- RPD of dual column results exceeds 40%

#- Sample result too high for accurate spike recovery.

Connecticut Laboratory Certification PH0116 Massachussets Laboratory Certification M-CT903 New York Certification 11982 Rhode Island Certification 199

Project: Hill Plain School, New Milford

Questions related to this report should be directed to David Ditta, Timothy Fusco, or Robert Blake at 203-377-9984.

Sincerely,

David Ditta

Laboratory Director

Report Comments:

Sample Result Flags:

E- The result is estimated, above the calibration range.

1 List

- H- The surrogate recovery is above the control limits.
- L- The surrogate recovery is below the control limits.
- B- The compound was detected in the laboratory blank.
- P- The Relative Percent Difference (RPD) of dual column analyses exceeds 40%.
- D- The RPD between the sample and the sample duplicate is high. Sample Homogenity may be a problem.
- +- The Surrogate was diluted out.
- *C1- The Continuing Calibration did not meet method specifications and was biased low for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased low.
- *C2- The Continuing Calibration did not meet method specifications and was biased high for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased high.
- *F1- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the low side.
- *F2- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the high side.
- I- The Analyte exceeds %RSD limits for the Initial Calibration. This is a non-directional bias.

All results met standard operating procedures unless indicated by a data qualifier next to a sample result, or a narration in the QC report.

Complete Environmental Testing is only responsible for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt.

ND is None Detected at the specified detection limit

All analyses were performed in house unless a Reference Laboratory is listed.

Samples will be disposed of 30 days after the report date.
