

# Vocabulary

**Variable** - It is a *letter* that stands for an unknown number.

$$x$$

**Numerical Expression** - A mathematical expression built from numbers and operations.

$$15 + 7$$

**Algebraic Expression** - A mathematical expression built from numbers, variables, and operations.

$$x + 3 \quad \text{or} \quad 2x$$

**Equation** - It is a sentence that states that two mathematical expressions are equal.

$$x + 1 = 12$$

$$5x = 105$$

**Section 1: New Vocabulary**

**Equation -** It is a sentence that states that two mathematical expressions are equal.

Examples:  $x + 1 = 12$     $5x = 105$

**Inverse operations -** You solve equations using inverse operations. Inverse operations are operations that undo each other... they are opposite.

The inverse operation of **addition** is −.

The inverse operation of **subtraction** is +.

The inverse operation of **multiplication** is ÷.

The inverse operation of **division** is ×.

**Section 2: Solving Equations**

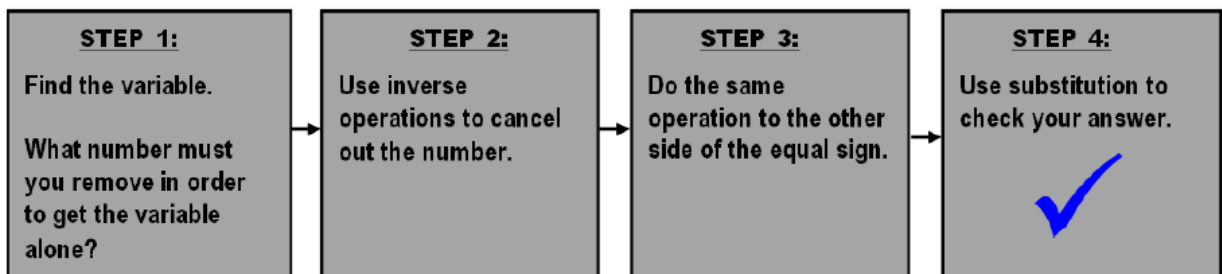

When asked to solve an equation, you are being asked to find the exact value of the *variable* in the equation.

**Our MISSION:** Is to get the variable *alone* on one side of the equal sign!

**Key Concepts to Remember:** Whatever you do to one side of an equation, you must do the same to the other side!  
This keeps the balance!

**Example 1:**  $x + 7 = 10$

$$\begin{array}{r} x + 7 = 10 \\ -7 \quad -7 \\ \hline \end{array}$$

$x = 3$

**Check:**

$x + 7 = 10$

$3 + 7 = 10$

$10 = 10$

**Example 2:**  $w - 24 = 119$

$$\begin{array}{r} w - 24 = 119 \\ + 24 \quad + 24 \\ \hline \end{array}$$

$w = 143$

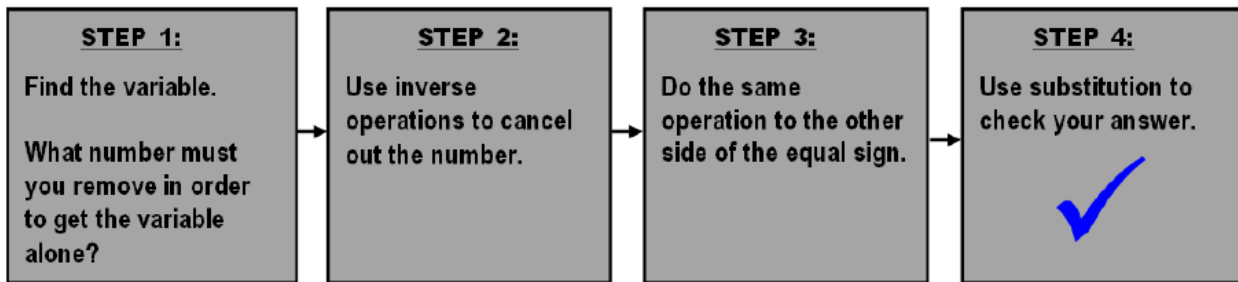

**Check:**

$w - 24 = 119$

$143 - 24 = 119$

$119 = 119$

**Example 3:**  $5x = 15$

$$\frac{5x}{5} = \frac{15}{5}$$

$$x = 3$$

**Check:**  $5x = 15$

$$5(3) = 15$$

$$15 = 15 \quad \checkmark$$

**Example 4:**  $\frac{x}{6} = 8$

$$\frac{x}{6}$$

$$\frac{x}{6} (6) = 8 (6)$$

$$x = 48$$

**Check:**  $\frac{x}{6} = 8$

$$\frac{48}{6}$$

$$\frac{48}{6} = 8$$

$$8 = 8 \quad \checkmark$$

Solve each equation. Please show where you use inverse operations. Check your answer.

**Teacher Guided Practice**

$$x + 165 = 512$$

$$\begin{array}{r} x + 165 = 512 \\ -165 \quad -165 \\ \hline \end{array}$$

$$x = 347$$

$$347 + 165 = 512$$

$$512 = 512 \quad \checkmark$$

$$p - 47 = 57$$

$$\begin{array}{r} p - 47 = 57 \\ +47 \quad +47 \\ \hline \end{array}$$

$$p = 104$$

$$104 - 47 = 57$$

$$57 = 57 \quad \checkmark$$

$$3b = 24$$

$$\begin{array}{r} 3b = 24 \\ \frac{3}{3} \quad \frac{3}{3} \\ \hline \end{array}$$

$$b = 8$$

$$3(8) = 24$$

$$24 = 24 \quad \checkmark$$

**You Try!!**

$$x + 73 = 100$$

$$\begin{array}{r} x + 73 = 100 \\ -73 \quad -73 \\ \hline \end{array}$$

$$x = 27$$

$$27 + 73 = 100$$

$$100 = 100 \quad \checkmark$$

$$p - 15 = 48$$

$$\begin{array}{r} p - 15 = 48 \\ +15 \quad +15 \\ \hline \end{array}$$

$$p = 63$$

$$63 - 15 = 48$$

$$48 = 48 \quad \checkmark$$

$$4b = 32$$

$$\begin{array}{r} 4b = 32 \\ \frac{4}{4} \quad \frac{4}{4} \\ \hline \end{array}$$

$$b = 8$$

$$4(8) = 32$$

$$32 = 32 \quad \checkmark$$

$$\frac{w}{9} = 13 \quad (9)$$

$$w = 117$$

$$\frac{117}{9} = 13$$

$$13 = 13 \quad \checkmark$$

$$\frac{w}{16} = 4 \quad (16)$$

$$w = 64$$

$$\frac{64}{16} = 4$$

$$4 = 4 \quad \checkmark$$
