A web browser (often referred to as a browser) is a software application for accessing information on the World Wide Web. It allows the user to visit websites and do activities within them. Some of the commonly used browsers are Chrome, Firefox, Internet Explorer, and Safari.

Because browsers are set up differently, some work better on certain websites than others. For example, **Schoology works better with Chrome or Firefox**. Even though your computer probably came with a browser already installed, you can still install another. Simply search for Chrome or Firefox and follow the instructions for downloading and installing the software on your computer.
