## Wilbur and Orville Wright: The Flying Brothers

Sopris West Six Minute Solutions

Wilbur and Orville Wright were the first people to fly an airplane. The brothers lived in Dayton, Ohio. **(They)** built bicycles for a living. Wilbur **(and)** Orville loved to design and invent **(new)** bicycles. The brothers opened their own **(bike)** shop in 1892.

As young boys, the **(brothers)** received a flying toy from their **(father)**. They became fascinated by the idea **(of)** flying. Wilbur spent his spare time **(reading)** many books about flying. He thought **(human)** flight was possible. Soon the brothers **(began)** to build gliders as well as **(bicycles)**. Gliders are a type of plane **(with)** no engine. The Wright brothers built **(three)** gliders in all. With each new **(glider)**, they learned more and more about **(flying)**. They collected data on wing design. **(Some)** of the data tables they created **(are)** still used today.

In 1903, Wilbur and **(Orville)** Wright built an airplane. This airplane **(was)** different from their gliders. This airplane **(had)** an engine to power it. They **(named)** this airplane "The Flyer." The first **(flight)** of an airplane was made on **(December)** 17, 1903. It took place near Kitty Hawk, **(North)** Carolina. With Orville as the pilot, **(the)** plane flew 120 feet. That first flight **(lasted)** only 12 seconds. The brothers continued to **(make)** flights with their airplanes. Each time, **(they)** flew a longer time. Their fourth **(flight)** lasted fifty-nine seconds. It flew for **(almost)** half a mile.

The Wright brothers' **(invention)** changed the world. For the first **(time)**, people had access to places they **(had)** never before been able to go. **(They)** could meet people in faraway places. **(The)** age of globalization began. With air **(travel)**, people of different cultures could come **(together)**. They could share ideas and values **(with)** one another.

## Wilbur and Orville Wright: The Flying Brothers

Sopris West Six Minute Solutions

Wilbur and Orville Wright were the first people to fly an airplane. The brothers lived in Dayton, Ohio. **(They, Of, It)** built bicycles for a living. Wilbur **(and, only, their)** Orville loved to design and invent **(almost, spare, new)** bicycles. The brothers opened their own **(thought, bike, the)** shop in 1892.

As young boys, the **(all, travel, brothers)** received a flying toy from their **(values, soon, father)**. They became fascinated by the idea **(of, the, possible)** flying. Wilbur spent his spare time **(reading, before, feet)** many books about flying. He thought **(human, their, brothers')** flight was possible. Soon the brothers **(ideas, brothers, began)** to build gliders as well as **(first, air, bicycles)**. Gliders are a type of plane **(in, used, with)** no engine. The Wright brothers built **(by, three, loved)** gliders in all. With each new **(glider, idea, about)**, they learned more and more about **(flying, north, received)**. They collected data on wing design. **(As, Time, Some)** of the data tables they created **(make, created, are)** still used today.

In 1903, Wilbur and **(as, Orville, globalization)** Wright built an airplane. This airplane **(and, was, well)** different from their gliders. This airplane **(never, had, able)** an engine to power it. They **(had, they, named)** this airplane "The Flyer." The first **(flight, three, bicycles)** of an airplane was made on **(changed, December, gliders)** 17, 1903. It took place near Kitty Hawk, **(seconds, North, access)** Carolina. With Orville as the pilot, **(meet, the, a)** plane flew 120 feet. That first flight **(lasted, kitty, world)** only 12 seconds. The brothers continued to **(make, fly, human)** flights with their airplanes. Each time, **(he, they, half)** flew a longer time. Their fourth **(bike, flight, living)** lasted fifty-nine seconds. It flew for **(glider, almost, this)** half a mile.

The Wright brothers' **(invention, flying, began)** changed the world. For the first **(own, time, power)**, people had access to places they **(had, today, fascinated)** never before been able to go. **(For, Lived, They)** could meet people in faraway places. **(The, In, They)** age of globalization began. With air **(travel, an, fourth)**, people of different cultures could come **(could, together, type)**. They could share ideas and values **(plane, with, some)** one another.
