# Unit XIII

## reatment of Abnormal Behavior

#### Overview

Unit XIII introduces, compares, and reviews psychotherapy, biomedical interventions, and treatments of psychological disorders. A detailed comparison of the techniques and methods of psychoanalytic, humanistic, cognitive, behavioral, and group therapies are addressed. Biomedical treatments are also discussed, addressing both historical and modern biomedical treatments for depressive disorders, anxiety, and schizophrenia. Finally, the unit examines methods of potentially preventing psychological disorders.

#### Modules

- **70** Introduction to Therapy, and Psychodynamic and Humanistic Therapies
- 71 Behavior, Cognitive, and Group Therapies
- 72 Evaluating Psychotherapies
- **73** The Biomedical Therapies and preventing Psychological Disorders

#### Tip #13 Get to Know the Exam

As you get closer to the AP® exam in May, it pays to make a visit to the College Board® website where actual previous AP® exams are available and come complete with answer keys for you to check yourself. Set aside a quiet time on a weekend a few months before the exam to take a released exam from beginning to end. The current time the College Board® allows for the multiple-choice portion of the psychology exam is 70 minutes, so set your clock and give it a try! When you are finished, check your answers and create a short study guide addressing the content of all the questions and concepts you missed. Take some time to review that material and then take another released exam a week or two later to see if you have improved!

# Module 70

# Introduction to Therapy, and Psychodynamic and Humanistic Therapies

#### Before You Read

### **Module Summary**

Module 70 is an introduction to three different kinds of therapy: psychotherapy, biomedical therapy, and client-centered therapy. An eclectic (or mixed methods) approach to therapy is also discussed. The goals, techniques, and themes of psychoanalysis and humanistic psychology are compared side-by-side and an explanation of Carl Rogers' client-centered approach closes the module.

Before beginning the module, take a moment to read each of the following terms and names you will encounter. You may wish to make vocabulary cards for each.

#### **Key Terms**

psychotherapy

biomedical therapy

eclectic approach

psychoanalysis

resistance

transference

psychodynamic therapy

insight therapies

client-centered therapy

active listening

interpretation unconditional positive regard

#### **Key Names**

Sigmund Freud Carl Rogers

#### While You Read

Answer the following questions/prompts.

#### 70-1

1. Compare the methods of psychotherapy and biomedical therapy. Discuss how they are used to treat psychological disorders.

2. How does eclectic therapy attempt to address the challenges with biomedical and/or psychotherapy?

418

1. Explain the assumption that psychoanalytic theory relies on to explain disorders.

2. What was Freud's goal with psychoanalytic therapy?

3. Describe how the technique of free association is utilized in psychoanalytic therapy? Describe its process.

4. According to psychoanalytic theory, what role does resistance play in therapy?

5. How does the psychoanalyst's interpretation of a patient's resistance offer insight into the cause of the disorder or conflicts?

. 1	Explain	transference	in	psychoanalytic	therapy.
-----	---------	--------------	----	----------------	----------

7. Briefly address why many modern day therapists have moved away from this treatment approach.

8. Describe how psychodynamic therapy differs from traditional psychoanalysis.

### 70-3

1. In what way are psychodynamic and humanistic therapies similar?

2. List the ways in which humanistic therapy differs from psychoanalytic therapy.

#### After You Read

## Module 70 Review

Mount Mount Matching Questions below to see if you have mastered the basics.

Terms or Names

- 1. psychotherapy
- 2. biomedical therapy
- 3. eclectic approach
- 4. psychoanalysis
  5. resistance
  6. interpretation
  7. transference
  8. client-centered
- 8. client-centered therapy
  - 9. active listening
  - 10. unconditional positive regard

Definitions or Associations

- A. an approach to psychotherapy that uses techniques from various forms of therapy
- B. the analyst's noting supposed dream meanings, resistances and other significant behaviors to promote insight
- C. Sigmund Freud's therapeutic technique
- **D.** a humanistic therapy, developed by Carl Rogers, in which the therapist uses techniques such as active listening and unconditional positive regard
- E. a caring, accepting, nonjudgmental attitude, which Rogers believed, would help clients to develop self-awareness and self-acceptance
- treatment involving psychological techniques and interactions between a trained therapist and a patient. This may include biomedical, psychodynamic, and humanistic methods as well as others
- G. empathic listening in which the therapist echoes, restates, and clarifies a client's statements in an effort for the client to gain a greater understanding of their own feelings
- H. the blocking from consciousness of anxiety-laden material which may often be threatening to the individual
- I. feelings or emotions directed at the analyst that are actually linked with other relationships
- prescribed medications or procedures that act directly on the person's physiology in an effort to treat an illness

# Module 71

### Behavior, Cognitive, and Group Therapies

#### Before You Read

#### **Module Summary**

Module 71 explains how the basic assumption of behavioral therapy differs from humanistic and psychodynamic therapies discussed in the last module. The techniques and methods of exposure therapy, aversive conditioning, and operant conditioning (all behavior therapies) are reviewed and compared. In addition, the goals and techniques of cognitive, cognitive-behavioral, group, and family therapies are presented.

Before beginning the module, take a moment to read each of the following terms and names you will encounter. You may wish to make vocabulary cards for each.

#### **Key Terms**

behavior therapy counterconditioning exposure therapies systematic desensitization virtual reality exposure therapy

aversive conditioning

token economy

cognitive therapy rational-emotive behavior therapy (REBT) cognitive-behavioral therapy (CBT)

group therapy family therapy

#### **Key Names**

Mary Cover Jones
Joseph Wolpe
B. F. Skinner
Albert Ellis
Aaron Beck

#### While You Read

Answer the following questions/prompts.

#### 71-1

1. Based on your prior knowledge regarding the behavioral and psychoanalytic approaches to psychology, how do you believe that a behavioral psychologist would approach the origins and recovery of someone dealing with a psychological illness?

2.	Correctly label the conditioning components of the bed-wetting scenario described in the text and explain how this would be helpful in training the child.
	US:
	UR:
	NS:
	CS:
	CR:
3.	Define counterconditioning, and explain how a behavioral therapist might use counterconditioning to replace a fear response to spiders.
4.	Briefly summarize Mary Cover Jones' 1924 work with counterconditioning.
5.	Reflecting on the story of "Little Albert" in the learning unit, how might Cover Jones' counterconditioning be used to replace Albert's fear of small, white furry objects?
6.	Discuss Joseph Wolpe's work with exposure therapies and explain how they are used to treat anxiety or phobias.

7. How does Joseph Wolpe's assumption that you cannot be simultaneously anxious and relaxed explain systematic desensitization? 8. Detail the steps in which systematic desensitization would be used by a behavior therapist to treat a phobia of flying in aircraft? 9. How does progressive relaxation help those going through exposure therapy? 10. Describe how virtual reality exposure therapy is being used to treat anxiety. 11. Explain aversive conditioning and provide your own example of an illness that might be treated with aversive conditioning.

	OR OTHER
71	-2
-/ '	

1. Explain the way in which therapy based on operant conditioning principles works.

2. Explain how operant conditioning could be used by a behavior therapist to treat ADHD.

3. Explain how a token economy can be utilized to impact and change behavior. What are the concerns with using this method?

#### 71-3

1. Discuss the assumptions that cognitive theory relies on to explain disorders.

2. How does Albert Ellis' rational-emotive behavior therapy (REBT) address illogical thinking?

3. Explain how Aaron Beck's therapy differs from Albert Ellis'.

4. Using table 71.1 explain the three phases of cognitive therapy regarding changing beliefs overtime.

Explain the goals and methods of cognitive-behavioral therapy (CBT). Also, explain why this treatment often works well in treating obsessive-compulsive disorder.

Briefly explain how dialectical behavioral therapy (DBT) attempts to help clients recover from their psychological illnesses.

#### 71-4

1. What are the benefits to group therapy?

. 1	Why is group	therapy often	n more	accessible for	those	seeking	treatment?
-----	--------------	---------------	--------	----------------	-------	---------	------------

3. Discuss the reasons a therapist would suggest family therapy for someone suffering from a disorder.

4. Discuss the benefits of joining a self-help group.

5. What is the most well-known self-help group and how do rates of recovery for those who have gone through this program relate to other types of therapies?

#### After You Read

#### Module 71 Review

1. Complete the chart below to see if you have mastered the basics. Some have been filled in for you to get started.

Samantha is a high school senior who is struggling in her courses. This is a shock to her, because she has always been a strong student. Samantha has been overeating, sleeping longer hours than usual, and has been having troubling thoughts of suicide. She is overcome with negativity and feels that maybe she just isn't smart enough to do well in school. Samantha is beginning to think she cannot keep up with her peers academically and is starting to withdraw from interacting with them socially as a result of this belief. Her mother, Andrea, suffers from depression and wants to take Samantha to a therapist but doesn't understand how therapists differ and what to expect. Use the chart below to explain the differences between the treatment options, methods and techniques available to Samantha.

	<b>How They Would View Cause</b>	How They Would Treat	Techniques Unique to Method
Psychoanalysis			free association interpretation, dream analysis
Client-centered therapy			
Behavior therapy			
Cognitive therapy	Samantha's self-blaming and overgeneralizing bad events, ruminating and thoughts		

	<b>How They Would View Cause</b>	<b>How They Would Treat</b>	Techniques Unique to Method
Cognitive-behavioral therapy			
Group therapy	would not focus on cause— support and feeedback from others facing similar issues		
Family therapy			

# Module 72

### Evaluating Psychotherapies and Prevention Strategies

#### Before You Read

#### **Module Summary**

Module 72 evaluates the various psychotherapies and describes the elements shared by all forms of psychotherapy. The impact of culture, gender, and values on the therapist-client relationship is explored. Finally, the author offers guidelines for selecting a therapist.

Before beginning the module, take a moment to read each of the following terms you will encounter. You may wish to make vocabulary cards for each.

#### **Key Terms**

meta-analysis
evidence-based practice
therapeutic alliance

#### While You Read

Answer the following questions/prompts.

#### 72-1

1. Explain the three reasons the client's perception of the success of therapy may not be valid.

a.

b.

c.

2	Describe the findings of the Massachusetts experiment that raised questions about a client's perceptions of treatment.
3.	In what ways do clinicians demonstrate confirmation bias or an illusory correlation regarding the success of treatment?
4.	How did the findings of Hans Eyesnck call into question the effectiveness of psychological treatment?
5.	How are studies being conducted today to attempt to address the question "Is psychotherapy effective?" What statistical procedure is used in the studies?
6.	Based on the evidence presented in this module, summarize the answer to the question "Is psychotherapy effective?" taking into account client perceptions, clinician perceptions, and outcome research.

7. What are the dangers to	not seeking treatment?
----------------------------	------------------------

1. Are some psychotherapies more effective than others for specific disorders? Explain.

2. Explain what is meant by evidence-based practice.

#### 72-3

1. Why should clients seeking treatment be especially careful when considering alternative treatments?

2. Discuss the supporting arguments and evidence in favor of EMDR therapy.

Discuss the supporting arguments and evidence in favor of light exposure therapy.

1. Regardless of the type of treatment one receives, explain the benefits treatment can provide to the client in addition to relief from their symptoms.

2. Explain how the therapeutic alliance is a key aspect of effective therapy.

di	٠			m	-
	-	-	- 1		
	7	ю.	_!	и.	
	•	En.	٠,	ω.	

1. Discuss the impact of culture, gender, and values on the success of therapy.

а				
		8	e	
	1	1	o

What are some signs that indicate a person should seek the help of a mental health professional?

2. Discuss the responsibilities of clinical psychologists, psychiatrists, clinical social workers and counselors,

#### After You Read

#### Module 72 Review

Answer the questions below to see if you have mastered the basics.

Your friend is having difficulties in school and seems to be showing signs of depression. Since you are taking
psychology, you suggest that she seek out a therapist and try to find help. She replies to your suggestion with
hesitancy because she is not certain that anything can help her situation. Use your understanding of client's
perspectives, therapists' perspectives, and outcome research to convince your friend that she is incorrect in
her assumption.

After convincing your friend that therapy is valid, she asks you about alternative therapies such as EMDR and light exposure therapy. How do you address her question about the effectiveness of these two therapies?

If your friend does agree to see a therapist, explain her options when selecting between different types of mental health professionals.

# Module 73

### The Biomedical Therapies

#### Before You Read

#### **Module Summary**

Module 73 reviews the various biomedical therapies and identifies the use and outcomes of drugs, brain stimulation, and psychosurgery techniques but also addresses how lifestyle changes can produce similar results for some disorders. Completing the module, is a discussion of self-care through a healthy lifestyle and the importance of recognizing our biopsychosocial systems, and ways in which resilience can help overcome challenging situations.

Before beginning the module, take a moment to read each of the following terms you will encounter. You may wish to make vocabulary cards for each.

#### **Key Terms**

psychopharmacology

psychosurgery

antipsychotic drugs

lobotomy

antianxiety drugs

resilience

antidepressant drugs

posttraumatic growth

electroconvulsive therapy (ECT)

repetitive transcranial magnetic

stimulation (rTMS)

#### While You Read

Answer the following questions/prompts.

73-1

1. How can lifestyle changes impact the chemistry of the brain?

Presented in the Thinking Critically About Therapeutic Lifestyle Change box, describe the training sessions that were implemented with individuals suffering from depression and the impact the training had on their mental health.

### 73-2

1. How has psychopharmacology revolutionized the field of psychological treatment?

2. Describe how double-blind procedures are used in experimentation (think back to the unit on research).

3. Discuss why double-blind studies have been used to determine the effectiveness of drug therapies in treating psychological disorders.

4. Complete the following chart regarding the method of operation, drawbacks, and successes of the following drug treatments.

	Drug Names	Method of Operation— Neurotransmitter Activity	Side Effects and Drawbacks	How Successful Are These Drugs?
Antipsychotic drugs				
Antianxiety drugs				
Antidepressant drugs				
Mood stabilizers				

1. Complete the following chart.

Technique	Procedures	Outcomes
Electroconvulsive therapy (ECT)		
Repetitive transcranial magnetic stimulation		
rTMS)		
Deep-brain stimulation	al a	
e e e e e e e e e e e e e e e e e e e		

2. Describe the controversial lobotomy surgery and compare the outcomes to today's modern psychosurgery. How prevalent is psychosurgery as a treatment today?

d				7
	7'	2.	А	
		"		

1. Discuss the role resilience plays in preventing psychological disorders.

2. In what way can psychologists, therapists, and society in general use the concept of resilience to decrease the number of cases of disorders?

3. Explain how posttraumatic growth can actually serve as an advantage to some who have gone through a difficult experience.

#### After You Read

#### Module 73 Review

Answer the following questions to see if you have mastered the basics.

- 1. A patient suffering from schizophrenia would likely be prescribed
  - a. an antidepressant drug.
  - b. an antianxiety drug.
  - c. an antipsychotic drug.
  - **d.** lithium.
  - e. an SSRI.
- 2. An antianxiety drug such as Xanax
  - a. is not addicting.
  - **b.** produces no withdrawal symptoms upon ceasing the medication.
  - c. works more efficiently when combined with alcohol.
  - d. should be used alone without additional therapy.
  - e. depresses the central nervous system.

Which of the following is not typically treated with the use of an antidepressant?

- a. depression
- b. somatoform disorders
- c. obsessive-compulsive disorder
- d. posttraumatic stress disorder
- e. anxiety

Which of the following accurately describes how Prozac works in the nervous system to relieve depression?

- a. It prevents the release of dopamine into the synapse.
- b. It allows for the increased reuptake of dopamine from the synapse.
- c. Prozac partially blocks the reuptake of serotonin from the synapse.
- d. Prozac increased the speed of reuptake of serotonin and norepinephrine from the synapse.
- e. It blocks acetylcholine from entering the synapse.

5.	A patient undergoing	would experience a brief electrical current sent through their brain	1.
----	----------------------	--	----

- a. ECT
- b. rTMS
- c. deep-brain stimulation
- d. psychosurgery
- e. a lobotomy

#### √ Check Yourself

Now that you have mastered the basics, work through the problems below to see if you can synthesize, evaluate, and analyze what you have learned.

Frank has been diagnosed with depression and an anxiety disorder and is considering the best treatment options. Explain the goals and specific techniques of each of the following so Frank can evaluate his options.

Psychoanalytic therapy:

- Behavioral therapy:
- Humanistic therapy

Cognitive therapy

	_	-1
•	Group	therapy

- · Biomedical treatments
- ECT

]Joseph Wolpe

Use the checklist below to verify your understanding of the unit's main points.
Can I describe the central characteristics of psychotherapeutic intervention?
Can I describe the major following treatment orientations used in therapy and how those orientations influence therapeutic planning?
Behavior
Cognitive
Humanistic
Can I compare and contrast the different treatment formats (e.g., individual, group, family)?
Can I summarize the effectiveness of specific treatments used to address specific psychological disorders?
Can I discuss how cultural and ethnic context influence choice and success of treatment (factors that lead to premature termination of treatment)
Can I describe prevention strategies that build resilience and promote competence?
Can I identify major figures in psychological treatment?
Aaron Beck
Albert Ellis
Sigmund Freud
Mary Cover Jones
Carl Rogers
B. F. Skinner
