

AP Chemistry

AP Chemistry is a college level course. Students can earn college credit for successful completion of this course and a good score on the AP Exam (typically 4 or 5). It is time-consuming, arduous, demanding and challenging, yet extremely rewarding.

This course will move at a very fast pace and classroom attendance is a **MUST**. Student will be prepared to do college level work of any type upon completion of this course. I will be emphasizing discipline, work habits, problem solving, and inquiry process that can be used in all further academic endeavors.

This course will cover two semesters of college chemistry. To be successful in the AP Exam you will need to dedicate 4-10 hours of additional work per week, consistently, outside of class working on AP chemistry material. This time will be spent on homework assignments, lab reports, problems sets, etc. There will be times when students will be able to complete items in class **IF** they use their time efficiently.
