New Milford's Mission Statement

The mission of the New Milford Public Schools, a collaborative partnership of students, educators, family and community, is to prepare each and every student to compete and excel in an ever-changing world, embrace challenges with vigor, respect and appreciate the worth of every human being, and contribute to society by providing effective instruction and dynamic curriculum, offering a wide range of valuable experiences, and inspiring students to pursue their dreams and aspirations.

Practical Math – Applications of Statistics

The goal of this a ½ year course is to provide a fundamental understanding of statistics. Topics include: mean, median, mode, range of a set of data, frequency distributions, histograms, graphs of data, standard deviation of a set of data, percentiles, quartiles, Z-scores, normal distribution, applications associated with these topics, and the use of calculators and computers.

Pacing Guide

Unit Title	# of Weeks
1. Vocabulary, frequency tables and graphs	4
2. Applications of Measures of central tendencies, including charts and graphs	3
3. Using the graphing calculator to find the measures of central tendencies	2
4. Applications of usual values	2
5. Applications of Percentiles	2
6. Outliers and boxplots	2
7. Applications of z-scores and the normal curve	3
8. Review and Final exam	2

Committee Member(s): Deborah Murnan Unit Title: Unit 1 – Vocabulary, frequency tables and graphs	Course/Subject: Practical Math Statistics Grade Level: 12 th grade # of Weeks: 4
Identify Desired Results	
Common Core Standards	
<ul style="list-style-type: none"> • <u>CCSS.MATH.CONTENT.HSS.ID.A.1</u> Represent data with plots on the real number line (dot plots, histograms, and box plots). • <u>CCSS.MATH.CONTENT.6.SP.B.4</u> Display numerical data in plots on a number line, including dot plots, histograms, and box plots. • <u>CCSS.MATH.CONTENT.HSS.IC.B.3</u> Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each. 	
Enduring Understandings Generalizations of desired understanding via essential questions (Students will understand that ...)	Essential Questions Inquiry used to explore generalizations
<ul style="list-style-type: none"> • Data can be gathered and classified through a variety of methods • Data can be presented in both chart and graph form • Data gathered inappropriately can cause a bias in the conclusions • The way that data is collected, organized and displayed influences interpretation. • The purpose of sampling is to provide sufficient information so that population characteristics may be inferred. • Data are collected for a purpose and have meaning in a context. • Graphical displays of data may be analyzed informally. • Poor data collection can lead to misleading and meaningless conclusions. • Graphs produce visual displays of data in meaningful ways. 	<ul style="list-style-type: none"> • What are the keys to data classification and experimental design • How can graphs be used to communicate information and/or misinformation • What can cause results to be biased • What is required to plan and conduct a survey? • What are sampling techniques and how do they reduce bias? • What are different methods by which data can be displayed? • What are the various methods of data collection? • How does data collection affect conclusions for a problem? • What are the differences between controlled experiments and observational studies? • What considerations should be made when designing an experiment? • How do graphs enhance the display of data?

	<ul style="list-style-type: none"> • How does one know which graph is appropriate to use for a given set of data?
Expected Performances What students should know and be able to do	
<p>Students will know the following:</p> <ul style="list-style-type: none"> • How to obtain and generate data • How to graph the data as a first step in analyzing data • How to interpret numerical summaries and graphical displays of data • How to display the distribution of a quantitative variable with a stem plot, dot plot or a histogram • How to display the distribution of a qualitative variable with a bar graph, pie chart or frequency polygon • How to make a time plot of data that may vary over time <p>Students will be able to do the following:</p> <ul style="list-style-type: none"> • Identify the methods for gathering data • Identify common sources of bias in surveys and experiments • Summarize the distribution of a categorical variable with a frequency table • Display the distribution of a categorical variable with a bar or pie chart • Display the distribution of a quantitative variable with a stem plot, dot plot or a histogram • Describe the distribution of a quantitative variable in terms of its shape, center and spread. 	
Character Attributes	
<ul style="list-style-type: none"> • Perseverance • Integrity • Responsibility • Honesty • Cooperation • Respect 	
Technology Competencies	
<ul style="list-style-type: none"> • Students use technology tools (i.e., calculators, smart boards, data collection probes, videos, educational software, their own personal devices) for problem solving, self-directed learning, and extended learning activities. • Students use the internet as a way to gather data • Students specifically use spreadsheets(i.e. Microsoft excel) to enter data and create graphs 	
Develop Teaching and Learning Plan	
<p>Teaching Strategies:</p> <ul style="list-style-type: none"> • Teacher will introduce statistical vocabulary and provide sampling models to which they apply • Teacher discusses sampling techniques which may cause data to be biased • Teacher demonstrates how to organize data into frequency tables and identify the various frequency 	<p>Learning Activities:</p> <ul style="list-style-type: none"> • Students should identify sampling techniques as they relate to 'real world' situations • Students should create their own frequency tables • Students should review given data to determine the appropriate graph • Students should create their own

<p>tables used</p> <ul style="list-style-type: none"> • Teacher will introduce line graphs: time-series, ogive and frequency polygon • Teacher will introduce bar graphs and histograms • Teacher will introduce other graphs: dot plot, stem plot, pie chart • Teacher will provide information as to when it is appropriate to use each type of graph • Teacher will discuss scales on the graph and how graphs can be made to be misleading 	<p>graphs based on given data</p> <ul style="list-style-type: none"> • Students will gather data from a variety of sources and create appropriate graphs • Students will enter data into a spreadsheet and use the software to create a graph.

<ul style="list-style-type: none"> • That a data set can be divided into percentiles/quartiles to more specifically interpret the data • The percentiles of a data set are used in the calculations of usual values and outliers. • Each percentile has a specific value associated with it • Each value in a data set has a percentile associated with it. 	<ul style="list-style-type: none"> • How is a data set divided into percentiles? • How do the percentiles aid in the determination of outliers and usual values? • How do you determine the percentile of a specific value? • How do you find the value at a specific percentile?
Expected Performances What students should know and be able to do	
Students will know the following: <ul style="list-style-type: none"> • How to divide a data set into quartiles • How to find the value at a given percentile • How to find the percentile for a given value Students will be able to do the following: <ul style="list-style-type: none"> • Calculate which value lies at a specific percentile • Calculate the percentile for a specific value • Calculate the 4 quartiles for a data set 	
Character Attributes	

- Perseverance
- Integrity
- Responsibility
- Honesty
- Cooperation
- Respect

Technology Competencies

- Students use technology tools (i.e., calculators, smart boards, data collection probes, videos, educational software, their own personal devices) for problem solving, self-directed learning, and extended learning activities.
- Students use the internet as a way to gather data
- Students use graphing calculators to enter data and retrieve calculations

Develop Teaching and Learning Plan

Teaching Strategies:

- Teacher will explain the concept of quartiles and how to calculate them, focusing specifically on the 1st and 3rd quartiles.
- Teacher will explain the concept of percentiles and the formulas to find a percentile for a specific value in the data set.
- Teacher will explain how to find the value at a specific percentile
- Teacher will provide applications of percentiles

Learning Activities:

- Students should be able to calculate the percentile of a value and find the value at a specific percentile
- Students should be able to calculate the values at the 1st and 3rd quartiles

Assessments

Performance Task(s)

Authentic application to evaluate student achievement of desired results designed according to GRASPS (one per marking period)

Other Evidence

Application that is functional in a classroom context to evaluate student achievement of desired results

Goal:

Role:

Audience:

Situation:

Product or Performance:

Standards for Success:

- Monitoring class work through board work, group work, questioning, walk-throughs
- Check for understanding via going over homework using white boards or the Smartboard.
- Quizzes
- Test (may include 10-20 multiple choice, 15-30 regular answer)
- Participation in class discussion, group work, and responses

Committee Member(s): Deborah Murnan
Unit Title: Unit 6 - Outliers and boxplots

Course/Subject: Practical Math Statistics
Grade Level: 12th grade
of Weeks: 2

Identify Desired Results

Common Core Standards

- CC.9-12.S.IC.1
Understand statistics as a process for making inferences about population parameters based on a random sample from that population.
- CC.9-12.S.IC.3
Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each.
- CCSS.MATH.CONTENT.HSS.ID.A.2
Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.
- CCSS.MATH.CONTENT.HSS.ID.A.3
Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).

Enduring Understandings

Generalizations of desired understanding via essential questions
(Students will understand that ...)

- An outlier in a data set influences the measures of central tendencies
- A boxplot is a graphic representation of the 4 quartiles of a data set
- An outlier is a value that is more than 1.5 IQR above the 3rd quartile or 1.5 IQR below the 1st quartile

Essential Questions

Inquiry used to explore generalizations

- What is an outlier and how does it influence a data set?
- Do all dispersions contain an outlier?
- How is a boxplot used to represent data?

Expected Performances

What students should know and be able to do

Students will know the following:

- How to calculate the values that are used to determine if a given value is an outlier
- How to find the 5 number summary
- How to construct a box plot using the 5 number summary

Students will be able to do the following:

- Use the 1.5 IQR rule to identify possible outliers and identify outliers in boxplots
- To create a 5-number summary of a variable
- To construct a box plot by hand from a 5-number summary

Character Attributes	
<ul style="list-style-type: none"> • Perseverance • Integrity • Responsibility • Honesty • Cooperation • Respect 	
Technology Competencies	
<ul style="list-style-type: none"> • Students use technology tools (i.e., calculators, smart boards, data collection probes, videos, educational software, their own personal devices) for problem solving, self-directed learning, and extended learning activities. • Students use the internet as a way to gather data • Students use graphing calculators to enter data and retrieve calculations 	
Develop Teaching and Learning Plan	
<p>Teaching Strategies:</p> <ul style="list-style-type: none"> • Teacher will introduce the concept of outliers and use the 1.5 IQR formula to determine the existence of outliers in a data set. • Teacher explains how to create a boxplot and how it is affected by the existence of outliers in the data set • Teacher will demonstrate how to set up a boxplot using formulas to calculate the 5 number summary and how to find the same information using the graphing calculator • Teacher will provide applications of outliers and boxplots 	<p>Learning Activities:</p> <ul style="list-style-type: none"> • Students should use calculations of the 5 number summary to create boxplots • Students should use the 1.5 IQR formula to determine the existence of outliers in a data set
