Next to the Georgia National Fairgrounds

Our Focus

In our animal and plant unit of study, we examine the relationship between fish and plants. This leads us into a discussion about **AQUAPONICS**. We teach our students the importance of plants and fish working together.

Problem- We need to enhance the fish habitat and increase the fish population at Lake Sinclair.

What we did- Students transplanted aquatic plants from the Go Fish pond.

Results- The plants grew and were transported to Lake Sinclair to help enhance the fish habitat and fish population.
