

# ALGEBRA 8<sup>th</sup> GRADE CURRICULUM

## Course 17003

This course will deepen student understanding of mathematical concepts such as functions and real numbers, will teach students how to solve a variety of different types of equations, and will enable students to read and interpret graphs. Special emphasis will be placed on connecting algebra to the real world and in preparing students for Algebra II.

### ALGEBRA 8<sup>th</sup> GRADE OUTLINE:

Goals	Skills	Summative Assessments	Time Frame	Main Resources
<ul style="list-style-type: none"><li>• Use estimation strategies in problem-solving situations.</li><li>• Simplify expressions involving polynomials.</li><li>• Analyze and/or use patterns or relations.</li><li>• Interpret and/or use linear functions and their equations, graphs, or tables.</li><li>• Describe, compute, and/or use the rate of change (slope) of a line.</li><li>• Analyze and/or interpret data on a scatter plot.</li><li>• Use measures of dispersion to describe a set of data.</li><li>• Use data displays in problem-solving settings and/or to make predictions.</li><li>• Apply probability to practical situations.</li></ul>	<ul style="list-style-type: none"><li>• Represent and/or use numbers in equivalent forms (e.g., integers, fractions, decimals, percents, square roots, and exponents).</li><li>• Apply number theory concepts to show relationships between real numbers in problem-solving settings.</li><li>• Write, solve, and/or graph linear equations using various methods.</li><li>• Write, solve, and/or graph systems of linear equations using various methods.</li><li>• Write, solve, and/or graph linear inequalities using various methods.</li><li>• Write, solve, and/or graph systems of linear inequalities using various methods.</li><li>• Use exponents, roots, and/or absolute values to solve problems.</li></ul>	Mid-year and End of Year Benchmark Assessments, PSSA.	1-year	Glencoe Algebra I ©2014

## ALGEBRA 8<sup>th</sup> GRADE MAP:

TIME FRAME	BIG IDEAS	CONCEPTS	ESSENTIAL QUESTIONS	STANDARDS	OBJECTIVES	DIFFERENTIATION	ASSESSMENT
Chapter 1: Foundations for Algebra (Weeks 1-6)	<ul style="list-style-type: none"> <li>Algebra is the connection between the small pool of arithmetic mathematics which students work with from kindergarten on and the lake of generalized upper level math which students use everywhere in high school. Having a firm foundation with the arithmetic operations and properties is a key component to success in algebra.</li> </ul>	<ol style="list-style-type: none"> <li>Writing an evaluating expressions with numbers and variables</li> <li>Identifying and using properties of numbers</li> <li>Identifying and writing equations, relations, and functions</li> <li>Identifying and interpreting graphs of functions</li> </ol>	<ul style="list-style-type: none"> <li>What are we going to need to be able to do to succeed the rest of the year?</li> </ul>	<p>A1.1.2.1.1 Write, solve and/or apply a linear equation (including problem situations).</p> <p>A1.1.2.1.2 Use and/or identify an algebraic property to justify any step in an equation solving process (linear equations only).</p> <p>A1.1.2.1.3 Interpret solutions to problems in the context of the problem situation (linear equations only).</p> <p>A1.2.1.1.1 Analyze a set of data for the existence of a pattern and represent the pattern algebraically and/or graphically.</p> <p>A1.2.1.1.2 Determine if a relation is a function given a set of points or a graph.</p> <p>A1.2.1.1.3 Identify the domain or range of a relation (may be presented as ordered pairs, a graph, or a table).</p> <p>A1.2.1.2.1 Create, interpret and/or use the equation, graph or table of a linear function.</p> <p>A1.2.2.1.4 Determine the slope and/or y-intercept represented by a linear equation or graph.</p>	<ul style="list-style-type: none"> <li>Students should be able to identify and use vocabulary words that apply to algebraic expressions.</li> <li>Students should be able to write algebraic expressions as verbal expressions and vice versa.</li> <li>Students should be able to use the order of operations.</li> <li>Students should be able to identify and use properties of numbers.</li> <li>Students should be able to solve functions.</li> <li>Students should be able to identify independent and dependent variables.</li> <li>Students should be able to identify and use parts of a relation.</li> <li>Students should be able to use and identify functions.</li> <li>Students should be able identify different types of functions.</li> <li>Students should understand and be able to use function notation.</li> <li>Students should be able to identify and interpret different parts of graphs of</li> </ul>	<p>Additional time</p> <p>Additional practice</p> <p>Partner/group work</p>	<p>Homework</p> <p>Classwork and Activities</p> <p>Quizzes</p> <p>Mid-Chapter Check</p> <p>Vocabulary Test</p> <p>Test</p>

				<p>CC.2.2.8.C.2 Use concepts of functions to model relationships between quantities.</p> <p>M08.B-F.2.1.2 Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch or determine a graph that exhibits the qualitative features of a function that has been described verbally.</p> <p>M08.B-F.2.1.2a Describe the relationship between two variables with a linear relationship displayed in graph form.</p>	functions.		
Chapter 2: Equations (Weeks 7-11)	<ul style="list-style-type: none"> <li>After learning what a variable is and how our numeric operations apply to them we can start working with variables in equations and using them to find an unknown value in problems.</li> </ul>	<ol style="list-style-type: none"> <li>Writing equations</li> <li>Solving equations</li> <li>Solving ratios and proportions</li> <li>Using ratios and proportions to solve percents and weighted averages</li> </ol>	<ul style="list-style-type: none"> <li>How can we determine what an unknown in a problem is or determine what variables we would need to be given to find another unknown?</li> </ul>	<p>A1.1.1.4.1 Use estimation to solve problems.</p> <p>A1.1.2.1.1 Write, solve and/or apply a linear equation (including problem situations).</p> <p>A1.1.2.1.2 Use and/or identify an algebraic property to justify any step in an equation solving process (linear equations only).</p> <p>A1.1.2.1.3 Interpret solutions to problems in the context of the problem situation (linear equations only).</p> <p>A1.2.1.2.1 Create, interpret and/or use the equation, graph or table of a linear function.</p>	<ul style="list-style-type: none"> <li>Students should be able to write verbal equations as algebraic equations and vice versa.</li> <li>Students should be able to solve equations for an unknown by using opposite operations to get all numbers to the opposite side of the equals sign from the variable.</li> <li>Students should be able to solve equations for an unknown where we have an unknown on both side of the equals sign.</li> <li>Students should be able to solve an equation for an unknown involving absolute values of</li> </ul>	<p>Additional time</p> <p>Additional practice</p> <p>Partner/group work</p>	<p>Homework</p> <p>Classwork and Activities</p> <p>Quizzes</p> <p>Mid-Chapter Check</p> <p>Vocabulary Test</p> <p>Test</p>

				<p>A2.1.3.1.4 Write, solve and/or apply linear or exponential growth or decay (including problem situations).</p> <p>A2.1.3.2.1 Determine how a change in one variable relates to a change in a second variable (e.g., <math>y=4/x</math>, if <math>x</math> doubles, what happens to <math>y</math>?).</p> <p>A2.1.3.2.2 Use algebraic processes to solve a formula for a given variable (e.g., solve <math>d = rt</math> for <math>r</math>).</p> <p>CC.2.1.HS.F.3 Apply quantitative reasoning to choose and Interpret units and scales in formulas, graphs and data displays.</p> <p>CC.2.2.HS.D.9 Use reasoning to solve equations and justify the solution method</p>	<p>the unknown.</p> <ul style="list-style-type: none"> <li>• Students should be able to identify proportions using multiple methods including but not limited to cross multiplication.</li> <li>• Students should be able to write ratios as unit rates and then use them to solve a bigger problem.</li> <li>• Students should be able to read and use scales to determine either the length of a scale model give the length of the actual or vice versa.</li> <li>• Students should be able to find a percent of change and identify it as a percent increase or a percent decrease.</li> <li>• Students should be able to find discounts, sales tax, and other mark-ups and mark-downs.</li> <li>• Students should be able to solve equations with multiple variables for a specific variable.</li> <li>• Students should be able to identify and solve for a needed variable in a literal equation.</li> <li>• Students should be able to convert between units of measure using dimensional analysis.</li> </ul>	
--	--	--	--	---	--	--

					<ul style="list-style-type: none"> <li>• Students should be able to write and solve problems that involve determining how much of a certain object or liquid would be needed to create a certain mixture.</li> <li>• Students should be able to write and solve equations for a uniform motion problem.</li> </ul>		
Chapter 3: Inequalities (Weeks 12-18)	<ul style="list-style-type: none"> <li>• Equations are such a vast field with multiple different uses that we need to focus on each branch individually. Linear functions is the first step down the branch of equations that deals with very unique equations called functions.</li> </ul>	<ol style="list-style-type: none"> <li>1. Graphing linear equations and using that to solve linear equations</li> <li>2. Finding rates of change of a function and finding the slope of a linear equation</li> <li>3. Finding and using equations for direct variation</li> <li>4. Identifying arithmetic sequences and determining an equation to represent the sequence.</li> <li>5. Identifying proportional and nonproportional relationships</li> </ol>	<ul style="list-style-type: none"> <li>• How can we use equations to model problems that can be represented by a line?</li> </ul>	<p>A1.1.1.4.1 Use estimation to solve problems.</p> <p>A1.1.2.1.1 Write, solve and/or apply a linear equation (including problem situations).</p> <p>A1.1.2.1.2 Use and/or identify an algebraic property to justify any step in an equation solving process (linear equations only).</p> <p>A1.1.2.1.3 Interpret solutions to problems in the context of the problem situation (linear equations only).</p> <p>A1.1.2.2.1 Write and/or solve a system of linear equations (including problem situations) using graphing, substitution and/or elimination (limit systems to 2 linear equations).</p> <p>A1.1.2.2.2 Interpret solutions to problems in the context of the problem situation (systems of 2 linear</p>	<ul style="list-style-type: none"> <li>• Students should be able to identify and write a linear equation in standard form.</li> <li>• Students should be able to find the "x" and "y" intercepts given an equation, table, or graph with out having to convert to another form.</li> <li>• Students should understand that the zero, root, solution, and x-intercept are all the same thing.</li> <li>• Students should be able to identify when an equation does not have a solution or when it has an infinite number of solutions.</li> <li>• Students should be able to identify solutions on a graph of a linear function.</li> <li>• Students should be able to find rates of change given a table or a graph.</li> <li>• Students should be able to find the</li> </ul>	<p>Additional time</p> <p>Additional practice</p> <p>Partner/group work</p>	<p>Homework</p> <p>Classwork and Activities</p> <p>Quizzes</p> <p>Mid-Chapter Check</p> <p>Vocabulary Test</p> <p>Test</p>

				<p>equations only).</p> <p>A1.1.3.1.3 Interpret solutions to problems in the context of the problem situation (limit to linear inequalities).</p> <p>A1.2.1.1.1 Analyze a set of data for the existence of a pattern and represent the pattern algebraically and/or graphically.</p> <p>A1.2.1.1.3 Identify the domain or range of a relation (may be presented as ordered pairs, a graph, or a table).</p> <p>A1.2.1.2.1 Create, interpret and/or use the equation, graph or table of a linear function.</p> <p>A1.2.1.2.2 Translate from one representation of a linear function to another (graph, table and equation).</p> <p>A1.2.2.1.1 Identify, describe and/or use constant rates of change.</p> <p>A1.2.2.1.2 Apply the concept of linear rate of change (slope) to solve problems.</p> <p>A1.2.2.1.3 Write or identify a linear equation when given the graph of the line 2 points on the line, or the slope and a point on a line, (Linear equation may be in point-slope, standard</p>	<p>slope of a line given two points on the line.</p> <ul style="list-style-type: none"> <li>• Students should be able to interpret what the slope of the line tells us about the graph of the line.</li> <li>• Students should be able to identify a direct variation and then write an equation to describe the direct variation.</li> <li>• Students should be able to use an equation to estimate a value at a given point.</li> <li>• Students should be able to identify arithmetic sequences and then write an equation to model the sequence.</li> <li>• Students should be able to use equations for arithmetic sequence to determine any term in an arithmetic sequence.</li> <li>• Students should be able to identify proportional and nonproportional relationships.</li> </ul>
