Remote learning is defined as internet-based learning that delivers content and enables communication between the educator and students. It is where the student and the educator are not physically present in a traditional classroom environment; therefore, students have access to appropriate educational materials and interact with their teachers daily online. Information is relayed through a delivery platform (Google and Seesaw) where educators and students can engage through discussion boards, video conferencing, online assessments, etc. Remote learning doesn't always mean a student is connected to the internet in order to learn.

Considerations we still need to think through:

On-site learning	Remote learning
	<p>How to teach students that don't have the internet? How do we take attendance for students that don't have the internet? How do we capture demonstrations of learning from students that don't have the internet?</p> <p>How do we fulfill SPED and Gifted services?</p> <p>Counseling? Reading Intervention with Lauren?</p> <p>What we do with classes such as: specials</p> <p>Equipment needs- Typically a student uses the equipment for a course on-site. What needs do we have to create kits for certain courses? Science, art</p>

Distribution of learning materials:

Chromebooks	Other material needs
