

DATE

Cottonwood Union School District
E-RATE Year 22 (2019-2020)
REQUEST FOR PROPOSAL – 470 # 190012536
2019-TECH1 Cabling

Question and Answers

Q: What type of fiber are we requesting?

A: We need fiber that will be compatible with our optical transceivers (ie Brocade Multimode Fiber 10-Gb SFP 10G-SFP-LRM)

Q: What is happening with the existing copper connections in rooms 25 and 30?

A: It is the district's desire to have the existing copper connections moved into the newly installed network racks, however if this is not possible due to cable lengths or other considerations, these copper connections can be left in their existing locations.

Q: What size network rack are we requesting?

A: The network rack should be large enough to install a 2U UPS, a 1U fiber connection, a 1U copper patch panel, and a 1U switch. Ideally, it would be small enough to fit above the current existing wooden supply cabinet in the classroom, but can be installed near that location if needed.
